Abstract

Information is provided on 27 species of lacewings (Insecta: Neuroptera) deposited in the Macedonian Museum of Natural History in Skopje, Macedonia. Five species are new to Macedonian fauna: *Chrysopa commata*, *Chrysopa nigricostata*, *Cueta lineosa*, *Dendroleon pantherinus*, and *Neuroleon tenellus*. The finding of the species *Neuroleon tenellus* extends its known distribution range in the Balkans widely to the north.

Key words: Neuroptera, lacewings, fauna, Balkan Peninsula, Republic of Macedonia

Introduction

The Macedonian Museum of Natural History in Skopje was founded by Stanko Karaman in 1926. He was inspired by the monograph "Mazedonien" published by Franz Doflein in 1921, which contained, among others, a chapter devoted to Macedonian antlions, owlflies and spoonwings (Doflein 1921). During the Second World War, the Museum became a part of the Imperial Natural History Museum of Sofia. During that period, Krastuy Tuleshkov was appointed as museum's director. He collected insects of different orders, among them also Neuropterans. After the Second World War, a rapid development of the museum started. When Petar Ikonomov was appointed as the director, the Museum worked intensively on collecting and preserving different materials. A renaissance of the museum activities resulted in the establishment of different departments, one of them was the Department of Entomology.

Unlike the more popular Lepidoptera and Coleoptera, the beginnings of the Neuroptera collection in the Museum were more modest. The oldest lacewings collected dates back to 1939. In 1990s, the collection of Neuroptera was inspected by Alexi Popov, who identified some of the lacewings deposited in the collection. Unfortunately, the data were not published. Due to the

progress in the taxonomy of the Neuropterida during the last decades, a revision of the lacewing collection was urgent. Despite of the fact, that the collection of lacewings is a small one, with approximately 400 individuals, it contains some rare species with an interesting distribution.

Until now, the lacewing fauna of Macedonia was insufficiently investigated and the knowledge is based on a great number of mainly sporadic records. A list of papers dealing with Macedonian Neuroptera is presented in Hristovski et al. (2015), Devetak et al. (2015a). Prior this study, 60 species of Neuroptera were known for the country (Hristovski et al. 2015, Devetak et al. 2015a). The aim of the present paper is to provide an updated list of lacewings (Neuroptera) in the Department of Entomology of the Museum.

Material and methods

We examined 400 pinned lacewings. We followed the nomenclature and taxonomy proposed by Aspöck et al. (1980, 2001), Monserrat (2016), and *Lacewing Digital Library* (Oswald 2017). Zoogeographical categorization of Neuroptera is used in accordance with Aspöck et al. (2001), Popov and Letardi (2010), and Devetak et al. (2015a). Data on the distribution of

the taxa were extracted from *Fauna Europaea*, version 2017.06 (Aspöck et al. 2013). Abbreviations used in the text: Mt. = mountain, r. = river.

Results

NEUROPTERA

Suborder Hemerobiiformia

OSMYLIDAE

Osmylus fulvicephalus (Scopoli, 1763)

Material examined:

CHrysopidae

Italochrysa italica (Rossi, 1790)

Material examined:

Macedonia:

Dojran, Ačikot; 28.06.1994; 1 ind., V. Krpač leg.

Matka; 16.07.1943; 1 ind., K. Tuleshkov leg.

Distribution:

Europe (Mediterranean part), Asia (Middle East).

Zoogeography: Holomediterranean.

Chrysopa perla (Linnaeus, 1758)

Material examined:

Macedonia:

Mavrovo; 29.06.1979; 1 ind., J. Čingovski leg.;

Mavrovo; 27.05.1981; 1 ind., J. Čingovski leg.

Skopje; 06.08.1943; 1 ind., K. Tuleshkov leg.

Distribution:

Europe, Asia.

Zoogeography: Euro-Siberian spread, polycentric, highly expansive.

Chrysopa commata Kis & Újhelyi, 1965

Vodno Mt.; 20.06.1942; 1 male, K. Tuleshkov leg.

Distribution:

Europe: Great Britain (England), Germany, Austria, Czech Republic, Slovakia, Latvia, Poland, Hungary, Ukraine, Romania, Republic of Moldova, Serbia, and Bulgaria.

Asia: Caucasus, Iran, Tajikistan, Siberia, and Kuril Islands (Aspöck et al. 2001, Aspöck et al. 2013). Zoogeography: Siberian.

New species for the fauna of R. Macedonia.

Chrysopa formosa Brauer, 1851

Katlanovo; 19.07.1957; 1 ind., S. Joksimović leg.

Skopje. 29.06.1941, 1 ind., 19.05.1942 1 ind., 19.06.1942 4 ind., 25.07.1942 1 ind., 29.07.1942 1 ind., 04.08.1942 2 ind., 04.08.1943 2 ind., 05.08.1943 2 ind., 30.07.1944 1 ind., 19.06.1945 1 ind.; all leg. K. Tuleshkov.

Skopje, Zelenikovo; 23-26.08.1954; 1 ind., K. Begoevski leg.

Vodno Mt.; 17.06.1945; 1 ind., P. Ilkonomov leg.

Distribution:

Europe, Africa (Mediterranean part), Asia.

Zoogeography: Euro-Siberian and Holomediterranean spread, polycentric, expansive.

Chrysopa nigricostata Brauer, 1851

Material examined:

Macedonia:

Skopje, 19.06.1942, 1 male, K. Tuleshkov leg.

Distribution:

Europe, Africa (Mediterranean part), Asia.

Zoogeography: Holomediterranean (expansive northwards).

New species for the fauna of R Macedonia.

***Chrysopa pallens* (Rambur, 1838)**

Material examined:

Macedonia:

Berovo; 20.08.1977; 1 ind., J.Čingovski leg. (non: *C. nigricostata*!)

Vodno Mt.; 17.06.1945; 1 ind., K.Tuleshkov leg.

Comment: Recently, two sibling species (*Chrysopa pallens*, *C. gibeauxi*) were recognized as valid (Tillier et al. 2014, Devetak et al. 2015b). The species *C. pallens* (in a strict sense) is referred for Macedonia by Devetak et al. (2015b).

Distribution:

Europe, Africa (Mediterranean part), Asia.

Zoogeography: Zoogeographic categorization is still uncertain.

***Pseudomallada flavifrons flavifrons* (Brauer, 1851)**

Material examined:

Macedonia:

Skopje, Treska r.; 31.07.1942; 1 ind., K.Tuleshkov leg.

Distribution:

Europe, Africa (Mediterranean part), Asia.

Zoogeography: Zoogeographic categorization is uncertain because of taxonomic problems; from the current perspective, Mediterranean spread, polycentric, particularly expansive northwards.

***Pseudomallada abdominalis* (Brauer, 1856)**

Material examined:

Macedonia:

Skopje; 04.08.1943; 1 ind., K.Tuleshkov leg.

Distribution:

Europe.

Zoogeography: Zoogeographic categorization is still uncertain.

***Pseudomallada zelleri* (Schneider, 1851)**

Material examined:

Macedonia:

Vodno Mt.; 20.06.1942; 1 ind., K.Tuleshkov leg. (On the label: »*Mallada prasinus*«; this is incorrect identifi-

cation!).

Distribution:

Europe (Mediterranean part), Asia (Middle East).

Zoogeography: Balkano-Pontomediterranean (expansive westwards).

***Chrysoperla carnea* (Stephens, 1836) sensu lato**

Material examined:

Macedonia:

In the collection, we recorded 22 individuals belonging to the complex of the common green lacewing species (*C. carnea* s.l.). Because the song data are missing, and their colouration has changed during the year, it was impossible to identify them to the species level.

***Suarius nanus* (McLachlan, 1893)**

Material examined:

Macedonia:

Vodno Mt.; 24.06.1945; 1 m, K.Tuleshkov leg.

Distribution:

Europe (East-Mediterranean part), Asia.

Zoogeography: Pontomediterranean – Anatolian.

Suborder Myrmeleontiformia

NEMOPTERIDAE

***Nemoptera sinuata* Olivier, 1811**

Material examined:

Stari Dojran; 26.05.1996; 2 females, V.Krpač leg.

Valandovo, Bašbos village; 24.05.1986; 1 female, N.Topukova leg.

Vodno Mt.; 21.05.1942; 1 female, G.Stojanov leg.

Žeden Mt.; 23.05.1994; 2 females, V.Krpač leg.

Distribution:

Europe, Asia.

Zoogeography: Euro-Siberian.

***Myrmeleon (Myrmeleon) noacki* Ohm, 1965**

Material examined:

Macedonia:

Skopje, Treska r.; 06.07.1942; 1 female, G.Stojanov leg.

Comment: The original description of this species is based on the paratypes originating from Macedonia (Drenovo near Kavadar; Ohm, 1965).

Distribution:

Europe (East-Mediterranean part), Asia (Anatolia).

Zoogeography: Balkano- and Anatolo-Pontomediterranean.

***Dendroleon pantherinus* (Fabricius, 1787)**

Material examined:

Macedonia:

Ohrid; 10.07.1945; 1 ind. (missing body parts), P.Ikonomov leg.

Jablanica Mt., Drenok; 1106 m a.s.l.; 19.08.2016; 1 ind., V.Krpač & R.Zeqiri leg.

Distribution:

Europe: widely distributed (Aspöck et al. 2013).

Asia: Turkey, Caucasus, and China (Aspöck et al. 2001).

Zoogeography: Siberian.

New species for the fauna of R. Macedonia.

***Macronemurus bilineatus* Brauer, 1868**

Material examined:

Macedonia:

Gevgelijska, Negorci village; 31.07.1969; 2 ind., J.Čingovski leg.

Katlanovo; VII. 1959; 1 ind., J.Čingovski leg.

Europe, Asia.

Zoogeography: Balkano- and Anatolo-Pontomediterranean, highly expansive.

Discussion

Although the Neuroptera of the Balkan Peninsula have been studied since the 19th century, the distribution of many species in the area is little known. The

fauna of the Neuroptera of Macedonia was until the recent period insufficiently known and a great number of sporadic data on the species occurrence in the country exists (for reviews of relevant papers see Hristovski et al. 2015, Devetak et al. 2015a). In the paper we present collecting places for 27 species originating from the country, among them five species are new to Macedonian fauna. With the new findings, the number of known Neuroptera in Macedonia has now raised to 65.

Two antlion species are rare. *Cueta lineosa* occurs in Europe in south Italy and the Balkan Peninsula. *Neuroleon tenellus* is a little known and very rare species, in Europe known only from four localities (Aspöck et al. 1980, 2001, Saure 1989, Aspöck et al. 2013, this paper).

Acknowledgements

DD is grateful to Vladimir Krpač who helped to clarify some problems regarding identity of collecting places, and DD is grateful to Slavčo Hristovski for all his efforts made to arrange the accommodation during the visits of the country in 2017. Both authors are grateful to Slavčo Hristovski and two more anonymous reviewers for their comments to earlier draft of the manuscript. The study was partly supported by the Erasmus Plus grant, and partly by the Infrastructure program of the University of Maribor (CORE@UM, I0-0029).

Мрежокрилците (Insecta: Neuroptera) во збирката на Природонаучниот музеј на Македонија во Скопје

Душан Деветак и Решат Зекири

За ова истражување беше направена ревизија на колекцијата на Neuroptera која се чува во Природонаучниот музеј на Македонија во Скопје. И покрај фактот што колекцијата на мрежокрилци е мала, со околу 400 примероци, таа содржи некои ретки видови со интересна дистрибуција. До сега, фауната на мрежокрилци на Македонија е недоволно истражена, а знаењето се базира главно на голем број инцидентни податоци. Тука е дадена информација за 27 вида мрежокрилци, меѓу кои пет се нови за македонската фауна: *Chrysopa commata*, *Chrysopa nigrifastata*, *Cueta lineosa*, *Dendroleon pantherinus* и *Neuroleon tenellus*. Видот *Cueta lineosa* е редок мрежокрилец, пред оваа студија на Балканот познат за Албанија, Грција и Бугарија. Наодот на вториот интересен вид, *Neuroleon tenellus*, пред оваа студија познат за Европа само од три локалитети во Грција, го проширува неговиот ареал на распространување на Балканот далеку на север. Со новите наоди, бројот на познати Neuroptera во Македонија се подига на 65 видови.

Клучни зборови: Neuroptera, мрежокрилци, фауна, Балкански Полуостров, Република Македонија
